Our Mission

Help organizations become best-run businesses

Our Vision

Help the world run better and improve people's lives

Our Passions

Teamwork, integrity, accountability, professionalism and trust

Next Generation Digital Business Suite

Over the last few decades, Enterprise Resource Planning (or ERP) software has undergone a number of significant shifts. In the 80s and 90s, they were the height of IT sophistication, offering complex programs to help tackle the overwhelming growth of business data. In the 00s and 10s, big data and an increasing dependence on technology mean that this growth has become even more intense. Unfortunately, many ERP systems in the marketplace haven't responded well to this change.

Many ERP packages available today are just older versions of software with a stylish new interface makeover (also known as screen scraping the presentation layer)—the technology remains the same. These ERP packages are referred to as the dreaded “legacy” systems. Unless a company wants to struggle with software that was originally built for operating systems such as DOS, these should be avoided at all costs.

A next generation or postmodern Nixla system is a managers' best approach to managing a company's key business information. A next generation system offers a variety of fully integrated, real-time module apps that can be personalized according to industry. They also offer a number of other innovative benefits, such as mobile functionality and embedded analytics.

Don't rely on old technology to solve new business problems. Nixla is one of the few ERP systems built entirely on new technology so that it can keep up with the business demands of today. Because of this new technology, Nixla software can adapt to changing needs with ease, such as the crucial need for mobile and online access, so that companies can access relevant information whenever necessary.

Collaboration

Collaboration is another essential in next-generation ERP. Collaboration is both internal-data accessibility across departments and divisions, and external-accessibility of data by suppliers and customers through self-service portals.

Collaboration improves processes allowing businesses to benefit in a multitude of areas by bringing the entire organization, including external business partners closer together.

Flexible, Scalable, Modifiable and Agile Business Suite

Nixla offers the flexibility and scalability needed to meet today's business operational requirements while discovering and capturing tomorrow's opportunities.

Nixla brings the next wave of simplification and innovations across core business functions. It is the next generation cloud ERP acts as a digital core, connecting the enterprise with people, business networks, Internet of Things, Big Data, and more.

Nixla offers all the effortless scalability, easy management, and complete security that is expected from cloud solutions.

It will help businesses become agiler and improve productivity. It also promotes cross-functional transparency and drives overall simplification and optimization of business processes. With end-to-end processes supporting finance, plan-to-product, order-to-cash, and procure-to-pay Nixla offer enterprise-ready functionality for digital businesses.

One System for Your Entire Business

When various front- and back-end systems run separately, it can wreak havoc on the processes that are meant to ensure your company is running smoothly. Without accurate data from sales, inventory management may suffer, while not having the latest information from accounting can trigger a ripple effect on everything from marketing budgets to human resources management.

Nixla integrates these systems so that every business function relies on a single database. With one source of information that contains accurate, real-time data, an ERP solution breaks up information logjams, helps staff make better decisions more quickly and frees up their time to work on more high-value exercises like helping the business grow even faster.

Nixla delivers an integrated and unified platform that seamlessly handles multiple currencies, taxation rules and reporting requirements across business' multinational and multi-subsidiary operations.

Single Platform for Multiple Services

Nixla provides a single cloud based platform to run and manage multiple business applications which eliminates the costs of having multiple applications for each business unit. With automated processes, Nixla enhances the productivity and speed of your business management procedures with reduced errors..

Corporate-Wide Visibility and Business Intelligence

Nixla encourages corporate-wide visibility even to the most remote locations. It enables shorter consolidation and reporting cycles and benefits the organization as a whole with quick and smarter decision making.

A next generation ERP system Nixla offers embedded analytics and business intelligence, so that users can generate personalized reports and ad-hoc queries to showcase business data whenever they like.

The best part about Nixla's analytics is that you never have to wait for data to sync because everything within the system is updated instantly in real time.

Better decisions with real-time metrics

Today's business environment requires you to make tough business decisions with the best information available. Unfortunately, most executives can only see their business in the rear-view mirror, which makes it hard to course-correct accurately in real time.

With Nixla's real-time dashboards, you get immediate, real-time insight into every aspect of your entire business — sales, marketing, fulfillment, operations, finance, and services — so you can see what's working and what's not. Immediately. Then you can act with maximum impact

Our business analytics solutions help you turn information into actionable insight.

Role Based Functionality and Push Based Information

By categorizing employee job roles within the Nixla, users are provided with quick and easy access to the functionality that they require to fulfill their daily tasks.

Nixla users no longer have to initiate the process of finding key information; Nixla Apps is designed to automatically 'push' data to users. Using techniques such as incorporation of data views to role-based screens, utilizing alerts and notifications and automating work flows to guide tasks, users are now not only kept up-to-date on current business statistics, but are also interacting with the ERP on a much higher level.

With information prompts to the user in real-time, planning, decision making and efficiency are now all improved. The risks of experiencing critical events such as stock-outs or production overruns are drastically reduced thus improving overall business operations.

Our business analytics solutions help you turn information into actionable insight.

Reduce Your IT Costs, Increases Productivity

Nixla unites fragmented data while automating processes from end to end. So you don't incur the costs of consultants and middleware vendors to cobble together multiple systems. Within a single, powerful application, Nixla combines CRM, accounting/ERP and e-commerce capabilities — and then rolls up the data from all of these applications into a clear and fast dashboard.

Eliminate IT costs and concerns associated with maintaining and upgrading separate applications.

Grow your company, not your systems

According to industry analyst firms like Gartner, smartly run mid-sized companies often grow faster than the industry average in tough times, simply by responding quickly to a changing environment. For that you need real-time metrics, the kind you can only get with Nixla.

Because Nixla is a SaaS solution, it lets you focus on your business, and not the infrastructure that runs it. We take care of the hardware, software, upgrades and security. And, as your business grows, Nixla grows with you, without adding cost and complexity. Nixla's SaaS architecture ensures that you'll never need to add hardware or perform additional integration in order to keep up with our latest upgrades.

Nixla lets you focus on the business decisions that grow your business, instead of the infrastructure that slows you down.

In contrast, with limited point solutions like Salesforce.com, Intacct and so on, you'll spend significantly more on integration, maintenance, and training. You'll need software and professional services to get the solutions to talk to each other, business intelligence software to show you what's going on, and business analysts to help you figure out what it all means. With Nixla, all that work is done for you. In fact, according to the Yankee Group, an on-demand suite can deliver up to 59% lower total cost of ownership (TCO) than an on-premise, best-of-breed point solution — even when evaluated over a three-to-five-year period.

You manage your business. Let us manage the software

In today's economic climate, SaaS makes sense. Nixla deploys quickly, you pay for only what you need, and there are no capital expenses. Plus, Nixla never becomes shelfware, because you only pay for those who use it.

With Nixla's SaaS architecture, there's no hardware to procure and no large, up-front license fees. This complete business suite replaces the need for multiple software products to run the various functions of your front and back office. All of which means growing and mid-sized enterprises can save hundreds of thousands of dollars by standardizing on Nixla.

Easy and Quick Implementation

We help you start fast and see results in weeks

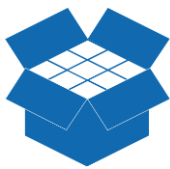

Easy to deploy and use for faster time-to-value and higher productivity:

- Pre-configured processes to allow a jump-start for productive use
- Simple, intuitive user experience and responsive design
- Instant insight-to-action with embedded analytics
- Guided configuration that empowers business and IT users to adapt processes as needed

All the services and support you need for winning results

Usually the biggest expense in deploying a business management system is the army of consultants needed to get it up, running, and integrated with your other systems. Drawing on 30 years of experience serving more than 1,000 customers, Nixla has created a methodology based on best practices for implementing this SaaS business suite quickly and cost-effectively.

The Nixla Business Success program offers you all the professional services and training you need to start showing a return on your investment fast. Then our life support team takes over to make sure that you continue to get the most out of your solution, with 24/7 access, and dedicated and knowledgeable staff.
